

## ABSTRACT

An optical film, which contains a cellulose acylate, at least one compound of formula (I) in an amount of 0.01 to 20 mass parts, and at least one cyclic compound having at least three substituents in an amount of 0.01 to 20 mass parts, to 100 mass parts of the cellulose acylate:

Formula ( I )

wherein R<sup>1</sup> to R<sup>7</sup>, R<sup>9</sup> and R<sup>10</sup> each independently is a hydrogen atom or a substituent; at least one of R<sup>1</sup> to R<sup>5</sup> is an electron-donating group; R<sup>8</sup> is a hydrogen atom, an alkyl group, an alkenyl group, an alkynyl group, an aryl group, an alkoxy group, an aryloxy group, an alkoxy carbonyl group, an acylamino group, an alkylcarbonyloxy group, a cyano group, or a halogen atom; and an optical compensation sheet, a polarizing plate, and a liquid crystal display device, each of which uses the optical film.
